About Me

I'm Mobin Rezaeifar, a passionate full-stack developer currently thriving in the dynamic realm of Etraab. With a solid foundation in ASP.NET, React.js, C#, JavaScript, TypeScript, Next.js, and Node.js, I navigate through the intricate world of web development with finesse. My expertise extends beyond mere coding. I delve into DDD, design patterns, and software architecture, crafting robust solutions that stand the test of time. Leveraging Docker for seamless deployment, Redis for efficient caching, and both SQL and NoSQL databases for data storage, I architect scalable systems that meet diverse needs. As a mid-level developer, I bring not only technical proficiency but also a relentless drive for excellence. Collaborative by nature, I cherish the opportunity to work alongside talented teams, leveraging collective insights to deliver exceptional results.
